

ASHLAND/NSP LAKEFRONT SITE
MAY 15, 2007 PROGRESS REPORT (No. 42)
WDNR BRRTS #02-02-00013
CERCLA Docket No. V-W-04-C-764
USEPA ID# WISFN057952

This is the forty-second progress report prepared in accordance with the Administrative Order on Consent (AOC) for the Ashland/NSP Lakefront Site, effective November 14, 2003. This report covers activities completed during April 2007. It is intended to meet the requirements described in Task 8 of the Statement of Work appended to the AOC.

Field Activities Completed

Free-Product Recovery System

The free-product recovery system operated continuously during April. Sediment deposition continued to constrict the flow lines in the treatment system, and several components required specific cleaning as part of routine maintenance.¹ Despite these conditions, the system was not shutdown during April.

A total of 171 gallons of free-product were collected between March 29th and April 30th. This is slightly higher than the 155 gallons recovered during March, and a daily rate of 5.7 gallons/day. This is also higher than the 5½ gallons/day measured during the same March period (flow during March was interrupted because of system shutdowns; the daily rate during the last two weeks of March was more than 13½ gallons/day). A total of 40,200 gallons of wastewater were also treated and discharged to the sanitary sewer during April. This volume is greater than the previous record of 37,000 gallons treated and discharged during August 2006, a period of heavy precipitation. The April volume includes nearly 36,000 gallons measured at the EW-4 flow meter. This is likely incorrect because the EW-4 meter was inoperative until March 10th when batteries were replaced. Since that date, flows measured at EW-4 were abnormally high (total system flow is measured at the effluent discharge and is unaffected by the EW-4 influent flow). This measured flow at EW-4 represents more than 90% of the discharge volume. Consequently, it will be inspected and information provided in the next (June 2007) monthly report.

The liquid phase treatment system operated normally during April. The total volatile organic compounds (VOCs) value was reduced between the influent and effluent measurements from 45,400 µg/l to 0.4 µg/l. The only effluent detection was a “J” level measurement of naphthalene (between the limits of detection and quantitation).

Samples from the air phase treatment system sampling showed normal operation. The anomalies measured during the previous two months because of condensate freezing on the effluent discharge were corrected. Samples show a reduction from 16.7 mg/m³ total hydrocarbons to less than the detection limit (6 mg/m³).

The summary of system monitoring data is included in Tables 1 - 5. Lab analysis reports for the

¹ The previous (April 2007) monthly report indicated that sediment buildup corresponded to periods of high precipitation. Although correct at that time, recent weeks in April have been abnormally dry. Recurring sediment deposition in the treatment system components has been measured since the SITE demonstration injection program in late 2006.

USEPA ID# WISFN057952

system monitoring are included in the Appendix.

Fifteen drums containing spoil from the treatability sampling program and personal protective equipment residuals were removed from the site by Northern Minnesota Services on April 13th.

RI Activities

All RI field activities were completed during November 2005.

SITE Program Activities

The SITE injection program was completed on February 2nd and all equipment demobilized from the Ashland site the week of February 5, 2007.

Tetra Tech completed the 90-day (final) soil sampling in the MW-15 area the week of April 9th; the results of the analyses are pending. At this same time, the 30-day NAPL monitoring event at the MW-13 area was performed. This activity consisted of the measurement of NAPL recovery and NAPL sample collection, for which the results are also pending.

The final 90-day NAPL monitoring and sample collection event is scheduled for early to mid-June. This will be the final SITE program activity. Tetra Tech and USEPA will then prepare the Innovative Technology Evaluation Report (ITER).

Treatability Studies

Sampling for treatability studies was completed on March 8th. The first of the analyses results (wind tunnel tests) were received the week of April 30th. These data will be compiled and submitted with the June 2007 monthly report.

Reporting Activities Completed

Revised RI Draft Report and Associated Documents/draft Alternatives Screening Memo

NSPW and USEPA convened a conference call to discuss the Wisconsin Department of Health and Family Services (WDHFS) concerns with the revised draft Human Health Risk Assessment (HHRA) on April 19th. WDHFS indicated three primary concerns regarding the document:

- Evaluation of the trespasser scenario to the POTW (exposure to VOCs via the inhalation pathway from groundwater seepage);
- Evaluation of utility workers to exposure of contaminated “oily water” via dermal contact in potential trenches at Kreher Park; additionally, WDHFS requested similar exposure conditions to individuals via this pathway should be evaluated for oily water observed as slicks in the affected sediments area;

CERCLA Docket No. V-W-04-C-764
USEPA ID# WISFN057952

- Discussing the results of the 1998 SEH HHRA in the text of the revised draft HHRA in lieu of referring to the results via an appendix.

Following much discussion regarding restrictions experienced during the field investigation for the RI to obtain representative samples data for the first two items, NSPW agreed to review the available data and engage in dialogue with WDHFS (a subsequent conference call was convened with NSPW and WDHFS on April 30th; NSPW agreed to utilize available data from the NAPL material collected via the free-product recovery system to prepare the appropriate but qualified risk calculations). NSPW agreed to prepare a supplementary memo to submit to WDHFS for its approval. NSPW and USEPA agreed that following review of this memo, the Agency would then submit its comments to the revised HHRA.

On April 25th, USEPA issued comments to the Remedial Action Objectives Technical Memorandum (RAO) in the form of an edited version of the January submittal and required that the RAO be revised to incorporate the suggested edits and resubmitted by May 16th. Also on April 25th, USEPA issued a Technical Memorandum describing its selected sediment Preliminary Remediation Goal (PRG) of 9.5 ug PAH/g dry weight (dwt) at 0.415% OC. The Agency arrived at this value by computing the geometric mean of a range of toxic effects levels between 5.6 and 16.3 µg PAH/g dwt observed during bioassay tests.

Along with the Agency's comments to the RAO memorandum, USEPA indicated that the revised draft Alternatives Screening Technical Memorandum would be due within two weeks of the April 25th email; on May 9th (NSPW submitted this document in both complete and edited versions on May 9th via email). NSPW subsequently received notice from USEPA that the next document required as part of the Feasibility Study (FS) process per the AOC/SOW, the Comparative Analysis of Alternatives Technical Memorandum, would be due within 30 days. The notice was received on April 26th. Consequently, the Comparative Analysis document will be submitted on May 25th.

Field Activities Planned

Coleman Engineering has continued to monitor the free-product removal system on a weekly basis during May.

Reporting Activities Planned

NSPW will incorporate USEPA's comments to the revised RAO Memorandum and submit the document for Agency review and approval in accordance with the required schedule on May 16th. The Comparative Analysis of Alternatives Technical Memorandum will also be prepared and submitted for review and approval on May 25th.

NSPW is also prepared to address review comments on the revised RI Draft Report and Associated Documents when received.

30-Apr-07	8,709.0	76,265	1,231,877	387,623	1,619,500

¹ Increase in free product removal w/ no change in groundwater removal volume due to free product collection tank and wash tank being pumped out and shipped to WRR in Eau Claire, WI. Total volume of 1324 gallons, w/ a current estimate of 85% free product in that volume.

² Correction of revised quantity of free product removed on 4/23/2003 of -211.9 gallons due to settling of emulsified free product measured on this date.

Table 4
Remediation System Air Treatment Summary
Northern States Power, Ashland, Wisconsin

Sample Date	Total Elapsed Time (days) ¹	Sample Type (Influent/ Effluent)	Air Flow Rate (CFM)	Effluent Temp. (1) Total Elapsed Time, in days, only for days of remediation system operation, not days since start-up.

(2) When a below detection result occurs, the assumed value is half of the detection limit.

For the 1/19/01 sampling, the samples were incorrectly labeled: Drum #1 is influent to Drum #1, Drum #2 is influent to Drum #2, and Air Stripper is Air Effluent.

(3) Daily emission rate based on laboratory results.

(4) Emission rate to date calculated from average daily emission rate and total days of remediation system operation.

(1) Total Elapsed Time, in days, only for days of remediation system operation, not days since start-up.

(2) When a below detection result occurs, the assumed value is half of the detection limit.

(3) Removal based on Influent vs. Effluent

(4) Emission rate to date calculated from average concentrations in effluent and total days of remediation system operation.

(5) This sample was collected at the oil-water separator discharge, prior to the air diffuser.

(6) This sample was collected at the inlet to the liquid phase carbon.

Values in brackets represent results greater than or equal to the LOD but less than the LOQ and are within a region of "Less-Certain Quantitation". Results greater than or equal to the LOQ are considered to be in the region of "Certain Quantitation". LOD and/or LOQ tagged with an asterisk(*) are considered Reporting Limits. All LOD/LOQs adjusted to reflect dilution.

LOD = Limit of Detection LOQ = Limit of Quantitation ND = Not Detected (< LOD) 1000 ug/L = 1 mg/L

DWB = Dry Weight Basis NA = Not Applicable %DWB = (mg/kg DWB) / 10000

MCL = Maximum Contaminant Levels for Drinking Water Samples. Shaded results indicate >MCL.

ANALYTICAL REPORT

Analyte	Result	Data Qualifiers	Date Analyzed	Analyst	Method	Quant. Limit
Sample ID: CQD0719-01 (Air Stripper)						
Benzene	<20.0ug/tube	<6.67 mg/m3	<2.09 ppm	4/18/2007	ljm	NIOSH 1501
Ethylbenzene	<20.0ug/tube	<6.67 mg/m3	<1.54 ppm	4/18/2007	ljm	NIOSH 1501
Hydrocarbons, Total	50ug/tube	16.7 mg/m3	--- ppm	4/19/2007	ljm	NIOSH 1550
Toluene	<20.0ug/tube	<6.67 mg/m3	<1.77 ppm	4/18/2007	ljm	NIOSH 1501
Xylenes, total	<30.0ug/tube	<10 mg/m3	<2.3 ppm	4/18/2007	ljm	NIOSH 1501
Sample ID: CQD0719-02 (1st Stage Carbon)						
Benzene	<20.0ug/tube	<6.67 mg/m3	<2.09 ppm	4/18/2007	ljm	NIOSH 1501
Ethylbenzene	<20.0ug/tube	<6.67 mg/m3	<1.54 ppm	4/18/2007	ljm	NIOSH 1501
Hydrocarbons, Total	<30.0ug/tube	<10 mg/m3	--- ppm	4/19/2007	ljm	NIOSH 1550
Toluene	<20.0ug/tube	<6.67 mg/m3	<1.77 ppm	4/18/2007	ljm	NIOSH 1501
Xylenes, total	<30.0ug/tube	<10 mg/m3	<2.3 ppm	4/18/2007	ljm	NIOSH 1501
Sample ID: CQD0719-03 (Air Effluent)						
Benzene	<20.0ug/tube	<4 mg/m3	<1.25 ppm	4/18/2007	ljm	NIOSH 1501
Ethylbenzene	<20.0ug/tube	<4 mg/m3	<0.92 ppm	4/18/2007	ljm	NIOSH 1501
Hydrocarbons, Total	<30.0ug/tube	<6 mg/m3	--- ppm	4/19/2007	ljm	NIOSH 1550
Toluene	<20.0ug/tube	<4 mg/m3	<1.06 ppm	4/18/2007	ljm	NIOSH 1501
Xylenes, total	<30.0ug/tube	<6 mg/m3	<1.38 ppm	4/18/2007	ljm	NIOSH 1501
